Pipeseal

Step by step guide on installing a pipeseal to your next EPDM Roofing project.

	**Step 1** Place pipe seal over the top of the pipe and cut with a knife or scissors to ensure a snug fit. Shop EPDM Pipe Boots
	**Step 2** Stretch boot over the pipe until the flange touches the deck, mark the perimeter with a crayon or similar, allowing an additional 2cm.
	Step 3 Fold the pipe boot up or remove and apply primer to the marked area using the scrubber pad and handle, allow to dry.
	Step 4 Reposition pipe seal, locate the join in the release paper and slowly remove at a shallow angle smoothing as you go with your hand. Once the backing paper has been totally removed roller using silicone roller.

	**Step 5** Apply a small bead of silicone sealant to the top of the pipe seal and secure with jubilee clip.
